

TECHNOLOGIEPARK BASEL

Zielgruppe des Technologieparks Basel sind innovative Jungunternehmen aus der Life Sciences-Industrie, der chemischen Industrie, der Umwelt- und Energietechnologie, der Nanotechnologie sowie der Informations- und Kommunikationstechnologie. Die Unternehmen werden auf Basis ihres Innovationspotenzials sowie ihres Potenzials, mittelfristig Arbeitsplätze in der Region zu schaffen und Wertschöpfung zu generieren, ausgewählt.

Der kommerzielle Start dieser Jungunternehmen aus Hochtechnologiebranchen wird durch das Angebot von Büro-, Labor- und Lagerflächen sowie Infrastrukturen zur gemeinschaftlichen Nutzung vereinfacht. Zudem stellt der Technologiepark Basel grundlegende Dienstleistungen zur Verfügung.

Erfolgreiche Jungunternehmen bleiben oft nur wenige Jahre im Technologiepark Basel. Nach Etablierung des Unternehmens und dessen Produkten im Markt finden die Unternehmen einen neuen Standort im regionalen Immobilienmarkt.

Der Technologiepark Basel ist nicht gewinnorientiert, sondern ist ein Instrument der baselstädtischen Standortförderung. Im Verbund mit weiteren Instrumenten leistet er einen Beitrag zur Erhöhung der Zahl der in der Region Basel neu gegründeten Hochtechnologie-Unternehmen.

ERWEITERUNGEN TECHNOLOGIEPARK BASEL

Aufgrund der grossen Nachfrage und um den Expansionsplänen der bestehenden Mieter gerecht zu werden, wurde der im 2011 erstellte Technologiepark Basel im Sommer 2014 zum ersten Mal erweitert. Neben einer Verdopplung der Labor- und Büroflächen wurden auch ein zentraler Empfangsbereich sowie ein Auditorium erstellt.

Die anhaltend hohe Auslastung der Labor- und Büroflächen im Technologiepark Basel sowie die Verfügbarkeit von freien Flächen im gleichen Gebäude haben dazu geführt, dass der Regierungsrat und der Grosse Rat des Kantons Basel-Stadt einer zweiten Erweiterung des Technologieparks Basel zugestimmt haben. Anfang 2018 wurde die Fläche um weitere 12 Biologie- und 2 Chemielabors, 34 Büros sowie weitere Gemeinschaftsräume (Sitzungszimmer, Küche, Aufenthaltsbereiche sowie Geräte- und Waschräume) erweitert.

Durch Auflösung des direkt benachbarten „Basel-Inkubator“ konnte dessen Flächen im Sommer 2019 ebenfalls in den Technologiepark Basel integriert werden, so dass dieser nun gesamthaft rund 6700 m² Fläche umfasst.

FACTS & FIGURES

Juristische Einheit

Technologiepark Basel AG, gegründet am 31. März 2011

Eigentümer & Aktionär

Kanton Basel-Stadt

Verwaltungsrat

Samuel Hess (Präsident), Robert-Jan Bumbacher (Vizepräsident), Nina Ryser-Iten (Mitglied)

Geschäftsleitung und Team

Der Verwaltungsrat delegiert die Geschäftsleitung des Technologieparks Basel an Nina Ryser-Iten (Leitung Standortförderung im Amt für Wirtschaft und Arbeit). Weiter sind Christian Harr (Operativer Leiter), Brigitte Jäggi (Administration), Eveline Buso (Empfang) und Giovanni Attianese (Techn. Mitarbeiter & Stv. Empfang) für den Technologiepark Basel tätig. Zudem bildet der Technologiepark Basel seit Anfang 2020 einen Lernenden aus.

Eröffnung des Technologieparks Basel

Sommer 2011, 1. Erweiterung Sommer 2014, 2. Erweiterung Anfang 2018, Integration „Basel Inkubator“ Sommer 2019

Vermietungsstand per März 2020

97%

Fläche

Seit Sommer 2014: ca. 3400 m²

Seit Anfang 2018: ca. 6400 m²

Seit Sommer 2019: ca. 6700 m²

Mietflächen

Büroflächen ab 12m²

Laborflächen ab 43m²

Mietpreise

Die Mietpreise im Technologiepark Basel liegen auf Marktniveau. Der Technologiepark Basel bietet innovativen Jungunternehmen aber zum Beispiel durch kurze Kündigungsfristen, der Verfügbarkeit von kleinen Mietflächen und der unentgeltlichen Vorhaltung von Expansionsflächen vorteilhafte Mietkonditionen.

www.technologiepark.ch

Mieter im Technologiepark

BioVersys AG, www.bioversys.com

BioVersys switches off bacterial drug resistance, thus reactivating approved antibiotics. We develop small chemical molecules, which switch off drug resistance on a gene regulatory level within bacteria, so called TRIC's (Transcriptional Regulator Inhibitory Compounds). Current pipeline: Gram negative and positive bacteria; Tuberculosis.

NBE-Therapeutics GmbH, www.NBE-Therapeutics.com

NBE-Therapeutics is a new Swiss Life-Sciences company focused on the development of novel antibody-based therapeutics. NBE-Therapeutics utilizes a portfolio of in-house developed, externally acquired, and in-licensed novel patent families for the development of novel, best-in-class antibody drug conjugates (ADCs), that can specifically target cancer cells for destruction.

Ramirez Engineering GmbH, www.ramirez-eengineering.ch

Ramirez Engineering GmbH is a Hard- & Firmware Engineering company, specialized in standard and custom specific developments. In addition to devices for Industrial applications, we are also specialized in developing and manufacturing KNX devices, the worldwide standard for home and building control. In this way, we help reducing energy waste in Offices and Hotels Worldwide.

abel-systems, www.abel-systems.ch

abel-systems is a software engineering and IT consulting company specialized in custom web and mobile development. abel-systems develops and distributes the process- and document-management solution QM-Pilot. Furthermore we provide IT solutions for content management, web and mobile apps, as well as the development of individual solutions with modern technologies.

Intilaris LifeSciences GmbH, www.intilaris.com

Intilaris LifeSciences is a life science company focusing on productivity improvements and optimizations in Clinical development of pharmaceutical companies. The company provides GCP consulting and develops tools and systems that will lead to better utilization of the current resources and optimization of the clinical development processes. The customers of intilaris LifeSciences are the Clinical Development organizations of research oriented pharmaceutical companies. To a wider extend, intilaris LifeSciences serves the Clinical Development organizations of research oriented biotechnology companies as well.

Hewlett-Packard (Schweiz) GmbH, www.hpe.com/ch

As a global leader in supercomputing, HPE provides highly advanced systems and solutions and world-class service and support to government, industry and academia. HPE technology enables scientists and engineers to not only meet existing and future simulation and analytics challenges but achieve remarkable breakthroughs by accelerating performance, improving efficiency and extending the capabilities of their most demanding applications.

Hutman Diagnostics AG, www.hutman.com

Hutman Diagnostics is an *in Vitro* Diagnostics Product Development and Portfolio Management Company in particular, Hutman Diagnostics develops next generation diagnostic kits for life-threatening pathogens so far diagnosed mainly by classical culture. The new diagnostics shorten the time for medical decision to less than 4 hours while having inclusivity of nearly 100%. This will save health costs and shorten the time to cure.

FGen GmbH, www.fgen.ch

FGen is a service provider for biotechnology, life-sciences, and industry. The company was founded in 2011 by Prof. Sven Panke (Bioprocess Laboratory of the Department of Biosystems Science and Engineering of the ETH Zurich in Basel) and a number of his scientific fellows. FGen develops and performs high throughput experiments and assays on a contract basis for its customers from biotech, pharma, and chemical industries.

STREKIN AG, www.strekin.com

Strekin AG is a private company located in Basel. We identify and develop differentiated medicines for diseases linked to stress related inflammatory pathways by scientific cross disease area target assessment.

Cellestia Biotech S.A., www.cellestiaibotech.com.com

Cellestia Biotech S.A. is a private biopharmaceutical company with strategic focus on anti-cancer drugs modulating the NOTCH signalling pathway. CB-103 is a novel, first-in-class, oral pan-Notch inhibitor for treatment of NOTCH dependent leukemia, lymphoma and solid tumors.

Vaximm AG., www.vaximm.com

VAXIMM is a privately held, clinical stage, Swiss/German biotech company developing oral T-cell immunotherapies for patients suffering from cancer. VAXIMM's technology is based on first-in-class oral T-cell activators using modified attenuated bacteria that can be readily adapted to target a wide range of cancer-related antigens.

AUREALIS PHARMA

Aurealis Pharma AG., www.aurealispharma.com

Aurealis Pharma is a Swiss-Finnish biopharmaceutical company with a technology platform facilitating combination therapy embedded in one single product that can be administered in a safe, efficient and cost-effective way. Safe food-grade lactic acid bacteria release multiple therapeutic human proteins locally in diseased tissue. Our first products are immuno-therapeutics to treat patients with chronic inflammatory wounds and cancer indications.

Edelweiss Connect GmbH., www.edelweissconnect.com

EdelweissConnect

Edelweiss Connect manages collaborative projects to achieve goals in scientific research, infrastructure development or service provision. Edelweiss Connect acts both as the initiator of independent research projects (eg. in Discovery Informatics, Knowledge Management, Life Sciences, Drug Safety, Environmental Chemistry, Risk Assessment) and as a provider of integrated services for corporate clients in these areas.

Vaximm AG., www.vaximm.com

VAXIMM

VAXIMM is a privately held, clinical stage, Swiss/German biotech company developing oral T-cell immunotherapies for patients suffering from cancer. VAXIMM's technology is based on first-in-class oral T-cell activators using modified attenuated bacteria that can be readily adapted to target a wide range of cancer-related antigens.

Ridgeline Therapeutics AG, www.ridgelinetherapeutics.com

Ridgeline is Versant's newest discovery engine and has laboratories in Basel Technology Park. Ridgeline's leadership team hails from Roche and has a proven track record in drug development.

SIP DayOne, www.dayone.swiss

DayOne - the innovation hub for precision medicine has a vision to "Create a world leading precision medicine hub respected for its impact and collaboration across silos."

KINARUS AG, www.kinarus.com

kinarus

KINARUS AG is a private company located in Basel. We identify and develop differentiated medicines for diseases linked to stress related inflammatory pathways by scientific cross disease area target assessment.

TargImmune Therapeutics AG, www.targimmune.com

TargImmune Therapeutics AG is a startup company established in March 2016 in Basel, Switzerland. TargImmune is developing a novel cancer-targeted platform technology CTPI in the field of immunology and personalized therapy.

Health Care Systems Schweiz GmbH (HCSG), www.hcsg.de

Making patient data smart - HCSG offers solutions for digital precision medicine. We combine medical data with psychosocial data creating actionable information and risk predictions to improve individual health outcomes. Our highly flexible IT platform allows large scale implementation for a multitude of patient conditions and care situations.

ARTIDIS AG, www.artidis.com

ARTIDIS AG focuses on development and commercialization of ARTIDIS (AUTOMATED AND RELIABLE TISSUE DIAGNOSTICS) nanotechnology platform for rapid diagnostics and treatment optimization. ARTIDIS is based on the atomic force microscope, which can determine the (nano)mechanical properties of native tissue by using a fine, nanometer-scale probe. able to examine tissue biopsies within an hour. By providing such nanomechanical profile of patient biopsy sample, ARTIDIS allows for rapid diagnosis of benign or malignant tumors and consequently optimization of treatment for cancer patients.

ABBA Therapeutics AG, www.abba-therapeutics.com

ABBA Therapeutics is a privately owned Swiss biotech company established in Basel in 2015. ABBA Therapeutics is committed to developing novel antibody drugs to modulate immune recognition and activation for anti-cancer therapy.

Skyhawk Therapeutics Europa GmbH, <https://www.skyhawktx.com>

Skyhawk Therapeutics, with laboratories in Boston (U.S.) and the Basel Technology Park, is a drug discovery and development company focused on revolutionizing disease treatment with small molecules that correct RNA expression. Our founders are leading experts in developing small molecule therapeutics for RNA-based disease. Our first drug candidates are targeted towards cancers and neurological conditions, some of which were previously considered undruggable.

Versameb AG, <https://versameb.com>

Versameb is a Swiss based biotechnology platform company focusing on the optimized local delivery of therapeutic proteins, currently focusing on applications in regenerative medicine. Our vision is to both improve existing therapies as well as develop transformative therapies in entirely new applications in disease indications of high medical need. Versameb is funded by private international investors. We are committed to create substantial long-term value for our patients, shareholders and other stakeholders.

Bright Peak Therapeutics AG,
<https://www.versantventures.com/portfolio/brightpeak-therapeutics>

Bright Peak is developing next-generation engineered cytokines for immuno-oncology indications.

Alentis Therapeutics AG, <https://alentis.ch>

Alentis Therapeutics discovers and develops novel medications to treat advanced liver diseases, such as liver fibrosis, cirrhosis and liver cancer (esp. hepatocellular carcinoma, HCC). Alentis has in-licensed platform technologies and monoclonal antibodies which are the result of more than a decade of research from University Strasbourg / INSERM. The portfolio is based on deep competence in liver diseases and fibrosis and the discovery of a novel, very fundamental mechanism of action underlying these diseases. Alentis has lead monoclonal antibodies which showed consistent compelling efficacy in multiple animal models of fibrosis and liver cancer. Alentis further has a proprietary discovery platform that allows for efficient discovery of compounds and targets that are relevant in the pathology of late stage liver diseases.

Polyneuron Pharmaceuticals AG, <https://polyneuron.com>

Polyneuron is pioneering a novel therapeutic approach for the effective and safe treatment of antibody-mediated autoimmune diseases of the nervous system where a pathological role of anti-carbohydrate autoantibodies is well established. Polyneuron's platform focus is on rare but devastating autoimmune diseases of the nervous system with an unmet medical need.

Anaveon AG, <http://anaveon.com>

We are developing IL-2 complexes which selectively promote effector T cell functions. Our compounds act as effective immune adjuvants with a broad therapeutic window and marked preclinical efficacy against cancer either as monotherapy or in combination with other therapies.

Sotio Biotech AG, www.sotio.com

SOTIO is an international biotechnology company leading the efforts of PPF Group, one of the largest investment groups in Central and Eastern Europe, to build a diverse pharma company specializing in oncology. SOTIO pursues this goal through its the SOTIO® in-house research and clinical development and related services, collaborations with external partners, in-licensing deals, investments and acquisitions. The company is developing new therapies focusing on the treatment of cancer and autoimmune diseases.

Ad Mirabiles AG, <https://admirabiles.com>

AD MIRABILES AG develops and sells patient specific implants for all kinds of indications, in particular we focus on CMF applications. Besides our current product offering, namely customized PEEK implants, we are committed to continuously develop our product and service portfolio further, in order to improve the quality of life of the patients. We form strategic partnerships making sure to offer cutting-edge Solutions.

BottMedical AG, <http://www.bottmedical.ch>

Bottmedical AG is a deep-tech spin-off from the University of Basel based on a IP portfolio related to the core polymer thin-film technology and more than 6 years' experience in nanotechnology of the founder team. Current commercialization projects relate to flexible micrometer-thin pressure sensor foils and soft electronic human machine Interfaces.

MOMM Diagnostics AG

MOMM Diagnostics GmbH aims to develop a novel in-vitro diagnostic test for the early diagnosis of preeclampsia at the point-of-care. Preeclampsia affects 5-8% of all pregnancies and is one of the top five causes for maternal and infant illness and death. Early identification of the condition is crucial to minimize complications. PE screening, using a simple test for the definite diagnosis at the obstetrician's office helps to save lives and money

Di Meliora AG, www.dimeliora.ch

Di Meliora AG is a spin-off of the University of Basel. Its BOTTICELLI implant system helps young dentists, who want to start placing dental implants by reducing complexity and increasing treatability. The company successfully rose funds early 2018 and is prototyping its first products. Through its patents it has also received a grant from the Swiss Federal Government for a CTI project to develop a ceramic implant.

AlloCyte Pharmaceuticals AG, www.allocyte-pharmaceuticals.com

AlloCyte Pharmaceuticals AG is the privately held Swiss company translating its proprietary next-generation small molecule integrin pharmacology into therapies of transformative potential for immune-mediated diseases of high medical need.

Lonza AG, www.lonza.com

We have created a Drug Product Services offering as part of our drive to enable customers to meet some of the greatest challenges in patient treatment. Together with our existing Development and Drug Substance manufacturing capabilities, our drug product services enable us to provide one-stop-shop service solutions for our customers. Drug product services focuses on parenteral dosage forms, including products for injection and infusion for intravenous, subcutaneous, intraocular and other routes of parenteral administration. Services include options for monoclonal antibodies and other biologics, drug conjugates, peptides and small molecules that require a parenteral dosage form.

Monte Rosa Therapeutics AG, www.versantventures.com/portfolio/monte-rosa-therapeutics

Monte Rosa is developing cancer therapeutics that modulate protein degradation pathways.

Perseo Pharma AG

Perseo pharma takes its name from Perseus, the hero of Greek mythology who, by wearing the Cap of Invisibility, was able to slay the Gorgon Medusa whose gaze was turning onlookers into stone. Perseo pharma's therapeutic enzymes, with their stealth coating, are able to invisibly reach their targets so as to slay the disease.

Tepthera AG, www.tepthera.com

Tepthera was launched in 2018 as a spin-off from the Institute of Molecular Health Sciences at the ETH Zurich. Tepthera's fundament is a set of proprietary platform technologies allowing efficient identification of T cell antigens. These disease relevant antigens will provide the basis for developing personalized therapies in various medical fields such as infectious diseases, autoimmunity and foremost in cancer immunotherapy. At Tepthera, we are convinced that effective therapies and medical products tailored for the individual come into reach and will leave behind the one-size-fits-all medications together with their limitations and side effects. Our vision is to bring medicine to a new level of precision.
